

SUMMARY

Software Engineer with expertise in building AI-powered systems and scalable distributed architectures. Proven track record architecting and deploying ML-powered platforms from concept to production, including enterprise RAG systems supporting 1,000+ concurrent users. Strong foundation in machine learning and full-stack development with hands-on experience across AWS, GCP, Docker, and modern AI frameworks. Worked on projects from SOW to customer delivery and maintenance.

SKILLS & EDUCATION

Languages: Python, Java, TypeScript, C++, Kotlin
ML/AI: TensorFlow, TensorFlow Lite, PyTorch, LangGraph, LangChain, NLP, Computer Vision
Cloud & Infrastructure: AWS, GCP, Docker, Kubernetes, MongoDB, Firebase
Frameworks: React, Node.js, Express.js, NestJS, FastAPI
Education: BS Computer Science, Business Admin Minor – Texas State University, 3.78 GPA, 2023

WORK EXPERIENCE

HGS Digital | Austin April 2025 – Current

Applied AI Engineer

- Engineered scalable back-office automation platform supporting 1,000+ concurrent users, reducing case worker analysis times from 4 hours to 1 hour through distributed RAG architecture and optimized data pipelines
- Led Pre-sales development teams building agentic workflow demos using LangGraph and LangChain, establishing reusable frameworks that reduced demo development time by 60%
- Developed scalable multi-tenant platform with React frontend, Python backend, Auth0 authentication, and MongoDB vector search deployed on AWS systems
- Architected enterprise agentic platform using LangGraph and LiveKit, unifying voice, chat, and automation AI workflows enterprise-wide

Equity Sales Finance | Austin July 2024 – April 2025

Full Stack Software Engineer

- Orchestrated full-stack modernization, transforming monolithic system into modular React/Node.js architecture while maintaining zero downtime
- Developed an automated contract processing pipeline with custom APIs, modernizing legacy paper workflows and reducing manual effort from 2 hours to 30 minutes daily
- Designed and implemented enterprise-wide architectural standards, resulting in 40% faster onboarding for new developers and improved code maintainability

Austin GIS | Austin August 2023 – April 2025

Machine Learning Engineer

- Architected and deployed three optimized TensorFlow Lite models for demographic analysis, achieving 80% inference accuracy while maintaining real-time performance on edge devices
- Engineered Android application integrating computer vision with dynamic ad serving logic, implementing sophisticated content management and scheduling systems
- Developed React-based administrative dashboard enabling real-time device management and content orchestration across distributed display network
- Built scalable Node.js backend on AWS infrastructure supporting real-time analytics, device management, and content distribution for enterprise deployment
- Led integration with Xibo CMS platform, enabling seamless content synchronization and management capabilities across the digital signage network
